

Modify Existing Language

Creating/modifying a language will automatically be updated on all user-end

To Modify a new language, follow the below steps:

1. Click on "Language Configuration" from the sidebar

The screenshot shows the JIRA Administration interface. At the top, there is a search bar and navigation tabs for Applications, Projects, Issues, Add-ons, User management, and System. A sidebar on the left contains a menu with the following items: OUTLOOK TO JIRA, AutoUpdate Configuration, Language Configuration (highlighted with a blue border), and OTJ Client. The main content area is titled "Outlook To JIRA Language Configuration" and includes a note: "Note: Any language created/modified will be automatically updated on the user-end." Below the note, there is a "Language" dropdown menu currently set to "English" and a "Create New Language" button. A horizontal tab bar contains "Plugin", "Setup", "Update", "Preferences", and "Alerts". The "Update" tab is active, displaying a list of configuration options, each with a label and a corresponding input field: About, Create, Create from e-mail, Create New, Go To JIRA, Help, Create, Preferences, Setup, Update, Check for updates, and Update. A blue "Save" button is located at the bottom left of the configuration area. At the bottom of the page, there is a footer message: "We value and appreciate receiving your compliments, suggestions or questions to better improve your OTJ experience."

2. Choose the language you would like to modify from the drop down list
