

# Modify Existing Language

Creating/modifying a language will automatically be updated on all user-end

To Modify a new language, follow the below steps:

1. Click on "Language Configuration" from the sidebar

The screenshot shows the JIRA Administration interface. At the top, there is a search bar labeled "Search JIRA admin" and a navigation menu with items: Applications, Projects, Issues, Add-ons, User management, and System. A sidebar on the left is highlighted with a blue box and contains the following items: OUTLOOK TO JIRA, AutoUpdate Configuration, Language Configuration (which is selected), and OTJ Client. The main content area is titled "Outlook To JIRA Language Configuration". Below the title is a red note: "Note: Any language created/modified will be automatically updated on the user-end." There is a "Language" dropdown menu currently set to "English" and a "Create New Language" button. Below this is a table with columns: Plugin, Setup, Update, Preferences, and Alerts. The table contains several rows of configuration options, each with a label and a corresponding input field. At the bottom left of the main content area is a blue "Save" button. At the bottom right, there is a footer message: "We value and appreciate receiving your compliments, suggestions or questions to better improve your OTJ experience."

Plugin	Setup	Update	Preferences	Alerts
About		About		
Create		Create
