

# Modify Existing Language

Creating/modifying a language will automatically be updated on all user-end

To Modify a new language, follow the below steps:

1. Click on "Language Configuration" from the sidebar

The screenshot shows the JIRA Administration interface. At the top, there is a search bar labeled "Search JIRA admin". Below it, a navigation menu includes "Applications", "Projects", "Issues", "Add-ons", "User management", and "System". The "Add-ons" section is expanded, showing a sidebar with "OUTLOOK TO JIRA", "AutoUpdate Configuration", "Language Configuration", and "OTJ Client". The "Language Configuration" option is highlighted with a blue border. The main content area is titled "Outlook To JIRA Language Configuration" and includes a note: "Any language created/modified will be automatically updated on the user-end." Below the note, there is a "Language" dropdown menu currently set to "English" and a "Create New Language" button. A horizontal tab bar contains "Plugin", "Setup", "Update", "Preferences", and "Alerts". The "Update" tab is active, displaying a list of configuration items with their respective labels and input fields: "About", "Create", "Create from e-mail", "Create New", "Go To JIRA", "Help", "Create", "Preferences", "Setup", "Update", "Check for updates", and "Update". A blue "Save" button is located at the bottom left of the configuration area. At the bottom of the page, there is a footer message: "We value and appreciate receiving your compliments, suggestions or questions to better improve your OTJ experience."

2. Choose the language you would like to modify from the drop down list
