

Modify Existing Language

Creating/modifying a language will automatically be updated on all user-end

To Modify a new language, follow the below steps:

1. Click on "Language Configuration" from the sidebar

The screenshot shows the JIRA Administration interface. At the top, there is a search bar labeled "Search JIRA admin". Below it, a navigation bar contains links for "Applications", "Projects", "Issues", "Add-ons", "User management", and "System". A sidebar on the left is highlighted with a blue box and contains the following items: "OUTLOOK TO JIRA", "AutoUpdate Configuration", "Language Configuration", and "OTJ Client". The main content area is titled "Outlook To JIRA Language Configuration". A red note states: "Any language created/modified will be automatically updated on the user-end." Below the note, there is a "Language" dropdown menu currently set to "English" and a "Create New Language" button. A horizontal tab bar below the dropdown contains "Plugin", "Setup", "Update", "Preferences", and "Alerts". The "Update" tab is selected. Underneath, there is a list of configuration items, each with a label on the left and a corresponding input field on the right: "About" (About), "Create" (Create), "Create from e-mail" (Create from e-mail), "Create New" (Create New), "Go To JIRA" (Go To JIRA), "Help" (Help), "Create" (Create), "Preferences" (Preferences), "Setup" (Setup), "Update" (Update), "Check for updates" (Check for updates), and "Update" (Update). At the bottom left of the configuration area is a blue "Save" button. At the bottom right, there is a footer message: "We value and appreciate receiving your compliments, suggestions or questions to better improve your OTJ experience."

2. Choose the language you would like to modify from the drop down list
