

# Modify Existing Language

Creating/modifying a language will automatically be updated on all user-end

To Modify a new language, follow the below steps:

1. Click on "Language Configuration" from the sidebar

The screenshot shows the JIRA Administration interface. At the top, there is a search bar and navigation tabs for Applications, Projects, Issues, Add-ons, User management, and System. The 'Add-ons' tab is selected, and a sidebar on the left contains a list of items: OUTLOOK TO JIRA, AutoUpdate Configuration, Language Configuration (highlighted with a blue box), and OTJ Client. The main content area is titled 'Outlook To JIRA Language Configuration' and includes a note: 'Any language created/modified will be automatically updated on the user-end.' Below the note, there is a 'Language' dropdown menu set to 'English' and a 'Create New Language' button. A table of configuration options is displayed, with columns for 'Plugin' and 'Alerts'. The table contains the following rows:

Plugin	Alerts
About	About
Create	Create
Create from e-mail	Create from e-mail
Create New	Create New
Go To JIRA	Go To JIRA
Help	Help
Create	Create
Preferences	Preferences
Setup	Setup
Update	Update
Check for updates	Check for updates
Update	Update

At the bottom of the configuration area, there is a blue 'Save' button. Below the table, a message reads: 'We value and appreciate receiving your compliments, suggestions or questions to better improve your OTJ experience.'

2. Choose the language you would like to modify from the drop down list
