

Login through Google to Jira Steps

To login successfully through **Google to Jira**, you need to follow the below steps

Login through Regular

1. Select Regular.
2. Enter your site URL that could be for example:
 - You can copy/paste the URL displayed in your browser for example in our case it is <https://css.infosysta.com>.
 - You can enter your base URL as jira.example.com or <https://jira.example.com>.
 - Your site might contain context path so you need to enter it as jira.example.com/jira or <https://jira.example.com/jira>.
 - If your instance is an Atlassian Cloud you can enter the URL as example.atlassian.net
3. Enter your username and password that you usually used in your Jira site
4. Cloud users can login through username or email and password that usually used in Jira site.

Login through OAuth:

This option is available for public Jira server instances and cloud.

1. Click on **OAuth**, username and password fields will disappear.
2. Before login, make sure that you have added the **Application link** in your JIRA instance.
3. Enter your Jira URL or past it in the URL field.
4. Click login, you'll be redirected to your instance to login or if you already logged in, You'll see the following dialog.

Welcome to JIRA

The application **Google To Jira** would like to have **read and write** access to your data on **css.infosysta.com**. The application will be allowed to use your credentials to authenticate (**username@domain.com**) as you in the future.

Allow

Deny

⚠ By allowing this, you can use **JIRA** without storing your JIRA password in **Google To Jira**.

[Click here](#) to view or revoke application permissions.

5. Click Allow.
